Assembly instruction with:

- Installation instructions
- Maintenance instructions
- Declaration of incorporation

for a drive system
(A partly completed machine as defined in Machine Directive 2006/42/EG)

About these assembly instructions

Abbreviations

MD = Machine Directive 2006/42/EG

AC = Alternating Current, AC servomotor (always synchronous motor)

BDC = Brushed DC, brush type Direct Current (DC) servomotor

BLDC = Brushless DC servomotor

PDF = Portable Document Format

Terminology

In these assembly instructions "product" always refers to a Rotary Unit.

Symbols used

In these instructions, you will find various symbols which are there to alert you to important information/facts and hazards:

Symbol	Signal word	Meaning
	Danger	Warning of possible serious to fatal injuries to persons
	Caution! Fatal Voltage!	The lightning symbol is a clear warning of danger from electric current! Failure to heed this warning can lead to personal injuries with fatal consequences.
	Warning, caution!	Warning of possible minor injuries to persons, of possible faults or destruction of the product or possible damage to property. Failure to take account of the circumstances indicated by this symbol (text, picture or table) can result in serious damage to property.
	Important information or note	Important information or note on how the product works.

Observing the safety instructions

Before commissioning the Rotary Units (as partly completed machines), working with them, or making any additions or modifications to the electrical installation, it is essential you read carefully:

- the safety guidelines in these assembly instructions
- the safety guidelines for electric drives and control systems in the instruction manual of the positioning module, drive controller, drive module or drive control used.

Although every care has been taken to avoid printing errors and mistakes, these cannot be ruled out. We would be grateful for any suggestions for improvements or information on possible mistakes or unclear formulation of facts and illustrations.

Note on CE compliance for partly completed machines:

isel rotary units comply with CE Directives. They are deemed partly completed machines as defined in Machine Directive 2006/42/EG and are accordingly not marked explicitly with the CE symbol.

Only after the compliance assessment procedures for the machine have been completed is the (complete) machine or system in which these linear units are installed awarded the CE mark by the manufacturer or distributor of the machine.

All other machine parts and/or machine components to which the CE safety Directives apply must not be commissioned until all the relevant requirements of Machinery Directive 2006/42/EC are met.

isel Germany AG does not accept any responsibility for any modifications you make to the rotary unit.

Version of this documentation: January 2013

Other documentation from *isel* Germany AG:

'Nothing is so good it can't be improved upon.' In accordance with this motto, as the manufacturer, we are constantly improving all our manuals (including operating instructions and assembly instructions) at considerable cost to ourselves.

We are committed to doing so since this is of benefit to both you as our customers and us:

We want you to be able to work efficiently with the relevant manuals and find the information you are looking for quickly. Many details in the manuals are the result of information we have received from our customers.

To support you, all the manuals are available to download in PDF format on our homepage:

<http://www.isel-data.de/manuals>

In your own interest:

Please read these assembly instructions carefully and keep them in a safe place. These instructions form an integral part of the "Rotary Unit MD 1, RF 1, ZD 30, ZR 20, ZDS 2030" product, regardless of whether these instructions are supplied/available in the form of an electronic storage medium (as a PDF file on a CD, DVD or memory stick) or as a printed version.

Please read and follow the safety guidelines in these assembly instructions.

1 General

This manual contains all important information about the assembly / installation, commissioning and maintenance of your rotary units. In addition, it provides information and important notes for your safety.

The isel-rotary units RF 1, MD 1, ZD 30, ZR 20, ZDS 2030 are rotary modules ready to install. They are for use mainly in machining and positioning tasks in factory automation, handling systems and light machinery construction.

These rotary units are available in different standard sizes with various gear reductions.

The options for horizontal or vertical positioning of the rotary axes of the rotational units means users can build a wide variety of constructions to suit their requirements.

Please note:

The product is classed as 'partly completed machine' and not a (complete) machine according to MD 2006/42/EC.

1.1 Safety guidelines

The following guidelines on safety and hazards are intended to protect you, third parties and the product. It is therefore essential you follow them.

Operating environment

- The surrounding medium must not have a corrosive effect on aluminium alloys, stainless steels (1.4305) or ABS plastics.
- When moving the product from cold to warm conditions, allow the product to adjust to the change in temperature for a few hours, to avoid possible damage from condensation.
- Do not install the product near devices which generate powerful electromagnetic fields. This could impair its operation.
- Avoid environments exposed to direct solar radiation, considerable heat, cold, humidity or moisture.

Power supply (only applies to products with multiphase motors, brushed DC/brushless DC or AC servomotors and a suitable motor amplifier / controller)

- Connect the power supply for the amplifier of the multiphase motor, for the iMD10/iMD20 amplifiers, the intermediate circuit of the iMD40 servomotor (L, N and PE terminals) or the isel single axis/multi-axis controller (e.g. iMC-P/iMC-S8, MC-1-series, iPU-series, etc.) only to a grounded mains socket with a mains voltage of 230V AC/50...60 Hz (single phase of the AC grid).
- It is preferable to use for the final stage of the multiphase motor or the final stage of the iMD10/iMD20 servomotor the original power supply recommended by isel Germany AG (primary power supply: 230V AC, secondary: 48V DC). Using a different, inappropriate power supply renders the warranty null and void. In addition, using an unsuitable power supply is associated with risks from electrical currents, such as electric shock, fire or short circuit!
- If you observe faults, push the EMERGENCY STOP button on the (single axis) controller, the CNC control panel/CNC control console, the switchgear cabinet/switchgear box or a manual control device. Activating the EMERGENCY STOP button interrupts the power supply to the motor amplifier. If the power supply used is damaged, you must not use it. Have a qualified technician check and if necessary repair the product.

The rotary unit

- For safety reasons you must not convert and/or modify the rotary unit on your own.
- In operation, the rotary unit must not be concealed by supplies (electricity or compressed air), objects (e.g. tools) or tarpaulins, packaging or other materials etc. (e.g. clothing), because this can lead to mechanical damage or heat obstruction and sometimes fire.
- If using a single-axis/multi-axis controller to control a linear unit (equipped with an AC, brushed DC (BDC) or a brushless DC (BLDC) servo motor), you need to ensure that the controller or motor amplifier used (in a control cabinet or on a mounting rack) is placed in a well ventilated environment.

Operation

(applies only to products supplied with a motor and a suitable motor amplifier or a suitable controller, e.g. a single-axis controller)

Only if the product is assembled correctly and the motor, the touch or inductive limit switches, the brake and the incremental measuring system (encoder) are correctly connected to the motor final stage/controller, will parameterisation, commissioning and operation/programming of the product (as a fully-functioning drive system) function correctly.

The technical details of special versions may differ from the following versions.

If the product malfunctions or you are unclear about its operational status, you should consult the relevant operating instructions/assembly instructions.

<http://www.isel-data.de/manuals>

Here you will find instructions and information on how to check the functions you require and remove the causes of a possible malfunction or have these removed.

You must always carry out the instructions you find completely and correctly in order to ensure the product functions correctly.

Never allow children or other persons who are vulnerable or at risk to operate the product unsupervised.

If you are still unclear about its operational status, it is highly recommended that you consult isel Germany AG, quoting the type and part number or serial number.

1.2 Proper use

The rotary units serve to rotate and position securely attached loads on the output flange in an environment where there is no danger of Exploded views and in accordance with the operational and environmental conditions specified for this product. The device can be installed in any position (horizontally, vertically or at an angle).

The rotary units are a partly completed machine (compare Article 2g in the MD 2006/42/EC). A partly completed machine is also defined here as follows (quote):

"An partly completed machine is a unit which almost forms a machine, but cannot fulfil any given function independently".

A drive system is an partly completed machine.

A partly completed machine is only intended to be installed in other machines or in other partly completed machines or equipment or be combined with it to form a machine together with it as defined in this directive."

The rotary units RF 1, MD 1, ZD 30, ZR 20 and ZDS 2030 are intended for installation into a machine or into other partly completed machines.

The product should not be used to transport people.

Any use other than as described above is improper and can lead to personal injury and damage to property.

1.3 Deliverables

The deliverables include:

- Assembly instructions and declaration of incorporation according to MD 2006/42/EC
- Fixing material
- Accessories (if any)

2 Installation instructions and overview of functions

First, this section provides an overview of the mechanical structure, installation or assembly of the rotary units and a description of their functions.

The instructions for commissioning/configuring the rotary unit and its programming by users depend on the motors used and the relevant controllers with amplifiers; they can be found in their documentation.

2.1 Functions

The rotary units RF 1, MD 1, ZD 30, ZR 20 und ZDS 2030 are of modular construction.

The rotary units are based on electrical drive units (stepped and servo-motor) with rotation/torque transmitted via reduction gearing to drive shaft / flange via toothed belt drive.

Toothed belt drives provide for the smooth and synchronous transfer of power. The drives are low-maintenance and very economical. Efficiencies of up to 98% are achievable depending on the number of teeth per disk and the type of belt used.

Individual pair transmission ratios are determined by the relationship between the driving and driven elements. For gear wheels - the number of teeth on the pinions: $i = \frac{z_{\text{Abtrieb}}}{z_{\text{Antrieb}}}$, and in accordance

thereto - the number of turns of the pinions: $i = \frac{n_{\text{Antrieb}}}{n_{\text{Abtrieb}}}$. If losses are ignored, the torque transmitted is

inversely proportional to the rotational speed: $i = \frac{M_{\text{Abtrieb}}}{M_{\text{Antrieb}}}$. If - as in the case of rotary units RF 1, MD 1, ZD 30, ZR 20 and ZDS 2030 - the speed of the driving element is greater than the speed of the driven element ($i > 1$), this is generally referred to as reduction.

where two or more transmissions are combined, the resulting transmission ratio is the product of the individual transmission ratios ($i_{\text{ges}} = i_1 * i_2 * \dots * i_n$).

single transmission

dual transmission

2.2 Changing the toothed disk (installation set RF 1)

The procedure for changing the toothed disk on rotary unit RF 1 is as follows.
In order to alter the transmission, the toothed disk must be changed.

Transmission	Toothed disk
1 : 24	24 teeth
1 : 52	52 teeth
1 : 100	100 teeth

1	First remove the cover (4 screws (1)).	
2	Loosen the 4 external screws (2) and the eccentric screw (3).	
3	Remove the toothed belt (4) and loosen the screw fixing the collet to the gear shaft (5).	
4	Fit the new toothed disk and re-tighten the fixing screw (5) (for installation set 1:100, the assembly nut is tightened using a special spanner (6)).	
5	Fit the matching toothed belt.	
6	Set the belt tension by turning the eccentric screw (3). A force of $F_e = 15\text{N}$ applied to the centre of the belt span should move it 4-5 mm.	
7	Re-tighten the eccentric screw and the motor and cover screws.	

Unnecessarily high prestressing reduces the working life of the drive, increases the load on the bearings and wear on the teeth as well as tending to increase the noise level in operation.

Too low a tension can lead to the belt teeth not engaging perfectly in the gearing and jumping out on overload.

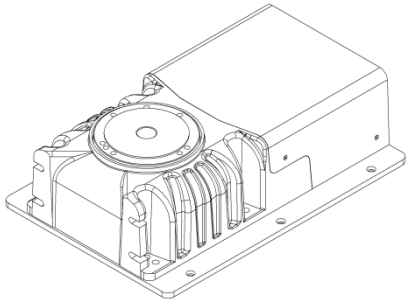

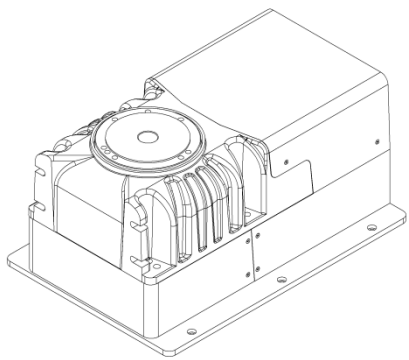

2.3 Assembly of the rotary units /drive elements

The following illustrations, drawings and item lists illustrate the structure of the rotary units.

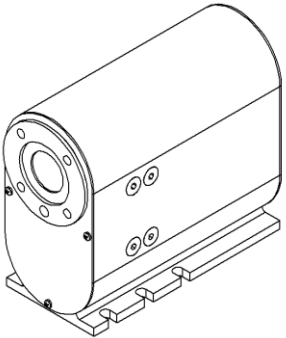

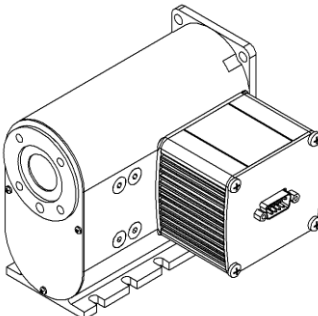

Options

Rotary units RF 1, MD 1, ZD 30, ZR 20 and ZDS 2030 are usually supplied ready for connection and with an integrated drive module.

 - 6 +24V switch
 - 7 Limit switch 1
 - 8 GND switch
 - 9 Hall signal B
 - 10 GND encoder
 - 11 Encoder track Z
 - 12 Encoder track B
 - 13 Encoder track A
 - 14 Hall signal C
 - 15 Limit switch 2
- Casing – cable shield

Pin assignment for Sub-D 9-pin multi-phase motors

Motor connection

View of pin insert at the insertion side

Sub-D-9-pin Pin

- 1 Motor phase 1A
 - 2 Motor phase 1B
 - 3 Motor phase 2A
 - 4 Motor phase 2B
 - 5 +24V switch
 - 6 +24V brake
 - 7 Limit switch 2
 - 8 GND brake
 - 9 Limit switch 1
- Casing – cable shield

3 Assembly of the rotary unit

Before you can assemble your new rotary unit you must remove any securing devices used in transport.

3.1 Mounting and adjustment instructions

You have several options for mounting the components individually:

Adjustment:

The rotary units have one- or two-plane alignment/adjustment surfaces lying parallel or perpendicular to the axis of rotation. These make it possible to set the rotary units as rotation axes or circular switching benches.

In order to ensure optimal rotary unit function, the axis of rotation must be precisely positioned/aligned to the system reference axis.

A) Freestanding installation of the rotary unit

You can place the rotary unit on a rack, a workbench or any other suitable, i.e. sturdy level base.

Choose the location carefully so that the product cannot fall or be knocked over by any impact or tug on the cables.

B) Rack mounting (recommended)

Use the depression in the base of the rotary unit to mount the rotary unit on your rack. Use appropriate panhead screws and the matching T-grooves/threaded rails (accessories) to secure it.

Make sure the fixing surfaces are sufficiently clean and sufficiently level.

The surface areas of these base bodies are plane-milled to achieve a high degree of precision.

However, to achieve the desired guide accuracies and running performance, the rotary unit must either be laid out over an appropriately flat surface or arranged over levelling plates. This achieves round or axial run-out tolerances of 0.02 to maximum 0.06 mm (according to rotary unit) at the transmission flange.

4 Commissioning, general information

The rotary unit is commissioned after mounting the relevant drive modules and any necessary cables.

Follow the relevant instructions in the documentation of the motor modules, amplifiers or complete controller used.

Procedure:

- **Switch off the controller and check that it is isolated.**
- Mount the rotary unit/rotary-swivel unit securely on a suitable work surface
- Connect the encoder lead.
- Connect the motor lead.
- Switch the controls on and check that the rotary unit/rotary-swivel unit is working correctly
- Carry out a test run
 - first at a slow travel speed,
 - then under operating conditions

Incorrect assembly (including loading on the axis system), cabling or commissioning increases the risks.

Unauthorised individuals should not be given access to the controller or the switch cabinet. Danger to personnel from electric shock! The system constructor is responsible for protecting personnel from the possibility of electric shock!

5 Fault list

Repairs to the product's electrical components should only be performed by a qualified electrician. Otherwise there is a risk of electric current causing fatal injuries.

Problem/Fault	Possible cause(s)	Remedy
Increased noise while running	Dirt Toothed belt wear	Clean the rotary unit in the area around the seals Check the belt tension
Stiffness	Dirt Incorrect tension	Clean the rotary unit Alignment , adjustment
Impaired positioning accuracy or repeatability	Overload	Reduce load
 Important: a hostile electromagnetic environment can result in operational malfunctions.		

Do not attempt to manipulate the controller or amplifier of the rotary unit.

6 Technical specification

6.1 Mechanical specification

Technical specification RF 1	Multi-phase motor MS 200HT*			Servomotor DC 100/EC 60S		
Reduction ratio	1 : 24	1 : 52	1 : 100	1 : 24	1 : 52	1 : 100

Added static breakdown torque ²	M ₀ [Nm]	648	172	255	152	
Added axial load ³	F _a [N]	8368	1293	1293	1293	
Added radial load ³	F _r [N]	19019	2940	2940	2940	
¹ applies to turning drives ² applies to stationary drives with static safeguard 1.5 ³ is on the basis of a normal load, average rotational speed 15 rpm, working life 15000h This data only applies to a load of → $\begin{aligned} M, M_0 &\rightarrow F_a=F_r=0 \\ F_a &\rightarrow F_r=0, M=0 \\ F_r &\rightarrow F_a=0, M=0 \end{aligned}$						
working life is calculated similarly to the roller bearings through the dynamic equivalent load, load factors, the average output speed and the service factor to the load ratings						

6.2 Electrical specification

You will find motor specifications, amplifier mains supply values and controller specifications in the relevant documentation.

<http://www.isel-data.de/manuals>

7 Maintenance and cleaning

7.1 Maintenance instructions

The maintenance of rotary units RF1, MD1, ZD 30, ZR 20 and ZDS 2030 is restricted to the regular removal of coarse dirt particles and contaminants together with toothed belt replacement.

Maintenance interval	Maintenance work
When necessary	Clean the rotary unit
300 – 700 hours run	Visual check of seals, attachments
2 years	Toothed belt replacement Replace shaft seal rings (if fitted)

7.2 Cleaning

Clean the surface of the rotary unit's cast housing and the output flange with a lint-free, dry/slightly damp cloth. Do not use harsh cleaning agents or abrasive cleaners.

8 Decommissioning / disposal

The symbol on the product or its packaging indicates that the product must not be disposed of with normal household waste.

Users must deliver the products/used devices to a collection point for used electrical and electronic devices. The separate collection and proper disposal of your products/used devices helps to conserve natural resources and guarantees recycling, which in turn protects people's health and the environment. You can get information on where to find collection points for your used devices from your local borough council, local waste disposal companies or on the Internet.

9 CE Compliance

Rotary units RF 1, MD 1, ZD 30, ZR 20 and ZDS 2030 are classified as 'partly completed machines' under MD 2006/42/EC and therefore comply with CE Directives (see declaration of incorporation of the manufacturer, isel Germany AG).

As an 'partly completed machine' the product does not carry the CE mark, although it still conforms to the relevant European Directives.

isel Germany AG hereby confirms that the product complies with the following directives:

EC Directive 2006/42/EC 'Machinery Directive'

EU directive 2006/95/EG "Electrical equipment for use within given voltage limits"/"Low voltage directive"

EU directive 2004/108/EG "Electromagnetic Compatibility (EMC)"

The installation declaration for *rotary units RF 1, MD 1, ZD 30, ZR 20 and ZDS 2030* is an integral part of these assembly instructions.

10 Service

For service and configuration of controllers/motor amplifiers (if in the deliverables) you can get advice from:

Mr Frank Hecht (Dermbach - Thüringen plant):

 **Tel:** +49 (0)6659 981-763
 **Email:** support@isel.com

Mr Frank Jansen (Eichenzell - Hessen plant):

 **Tel:** +49 (0)6659 981-765
 **Email:** support@isel.com

11 Warranty

Warranty:

Over and above the seller's statutory liability and subject to the conditions below, as the manufacturer we guarantee the durability and flawless operation of properly used products from isel Germany AG. The warranty covers the functioning of isel Germany AG products and includes all defects that are demonstrably attributable to manufacturing or material faults.

Warranty exclusions:

All replaceable individual components, e.g. screws, connecting pins etc. are excluded from this warranty. Furthermore, we accept no liability for damage caused by:

inappropriate or improper use

faulty or negligent handling

failure to observe installation instructions and instructions on care, as well as modifications or repairs carried out by users themselves

effects on the material's surface caused by chemical or physical agents, as well improper use, e.g.

damage by sharp objects

We do not accept any liability for consequential damage!

We do not accept any liability for damage to persons or property that is caused by incorrect handling or failure to obey the safety guidelines. In cases such as these no claim can be made under the warranty.

Warranty conditions:

Our warranty only covers at our discretion repair or replacement of the product free of charge for first/end users within the warranty period.

Warranty period:

The warranty period under our Terms and Conditions of Trading (isel Germany AG's T&C, section VI) is one year.

For complaints, please contact the seller or manufacturer direct, quoting the invoice/delivery note number.

12 Declaration of incorporation in accordance with MRL 2006/42/EG

Declaration of incorporation according to EC Machinery Directive 2006/42/EC, Appendix II B

The manufacturer **isel** Germany AG
 Bürgermeister-Ebert-Straße 40
 D-36124 Eichenzell, Germany

hereby declares that the product (**partly completed machine**)

Product description:	Rotary unit RF 1	Part number: 26024x xx00
	Rotary unit MD 1	Part number: 261010 0x10
	Rotary unit ZD 30	Part number: 261100 0000
	Rotary unit ZR 20	Part number: 260300 0000
	Rotary unit ZDS 2030	Part number: 265000 0000

complies with the basic **health and safety requirements** of EC Machine Directive 2006/42/EG Appendix I.

The following harmonised standards were applied:

EN ISO 12100-1:2003 Safety of machinery - Basic concepts, general principles for design - Part 1: Basic terminology, methodology
 EN ISO 12100-2:2003 Safety of machinery - Basic concepts, general principles for design - Part 2: Technical principles
 EN 349:2008-09 Safety of machinery - Minimum gaps to avoid crushing of parts of the human body
 EN 14121-1:2007 Safety of machinery – Risk assessment – Part 1: Principles
 EN 60204-1:2006 Safety of machinery - Electrical equipment of machines - Part 1: General requirements

The following additional EC Directives relevant to this product were applied:

Low voltage directive 2006/95/EC

The **technical documentation** for this partly completed machine was produced in accordance with Appendix VII Part B. The manufacturer undertakes to pass on these technical documents to national authorities in electronic form on request.

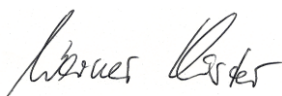

The member of staff responsible for producing the technical documents or assembly instructions/installation declaration is: **Mr Helmut Danz**

The product (partly completed machine) is intended for installation in a machine or for combining with other partly completed machines to form a single machine as defined in MRL 2006/42/EC, Article 1, Section (1) a.

This partly completed machine (product) must not be commissioned until the machine in which this product is installed or or which it forms a component meets the provisions of all the relevant directives (especially MD 2006/42/EC) and this (complete) machine carries a CE mark.

Place, date:

Dernbach, 5 February 2012
